Eliminating Paperwork

About Me >>> Eduardo Pezzi

- ❑ 10 years in business operations management
- ❑ Post Graduated in Blockchain development at George Brown College
- ❑ Study Entrepreneurship at UC Berkeley
- ❑ Member of Digital Transformation Committee at the American Chamber of Commerce

Understanding the problems

- ❑ Documents signature and management cost millions
- ❑ Digital world demands digital signatures
- ❑ Current digital signature solutions are centralized and insecure

Bank of Montreal's Digitization Program

— — —

Context

- ❑ 92 million sheets of paper printed annually at branches
- ❑ 464 million sheets of paper in secure, offsite storage
- ❑ 760 million sheets of paper shredded annually

Results

- ❑ 92% decrease in scanning errors
- ❑ 66% drop in missing files
- ❑ 8 million sheets of paper saved

Solution

A **Digital Signature management** platform, using **Blockchain** to create a secure and decentralize signature, allowing to users build a **identity** based on those **agreements** and **relationships**.

Our **GOAL** is making **easier** and **more democratic** to people manage your digital presence

Benefits

Security – Digital signature based in a strong cryptography primitives.

Benefits

Security – Digital signature based in a strong cryptography primitives.

More Control – There is no intermediary's custody. Your signature key stays private with you, increasing control.

Benefits

Security – Digital signature based in a strong cryptography primitives.

More Control – There is no intermediary's custody. Your signature key stays private with you, increasing control.

Reliability – Documents can be verified, guaranteeing authenticity of data and immutability

Features

— — —

**Make Digital and
verifiable Contracts**

**Create a Digital
Cryptography Signature**

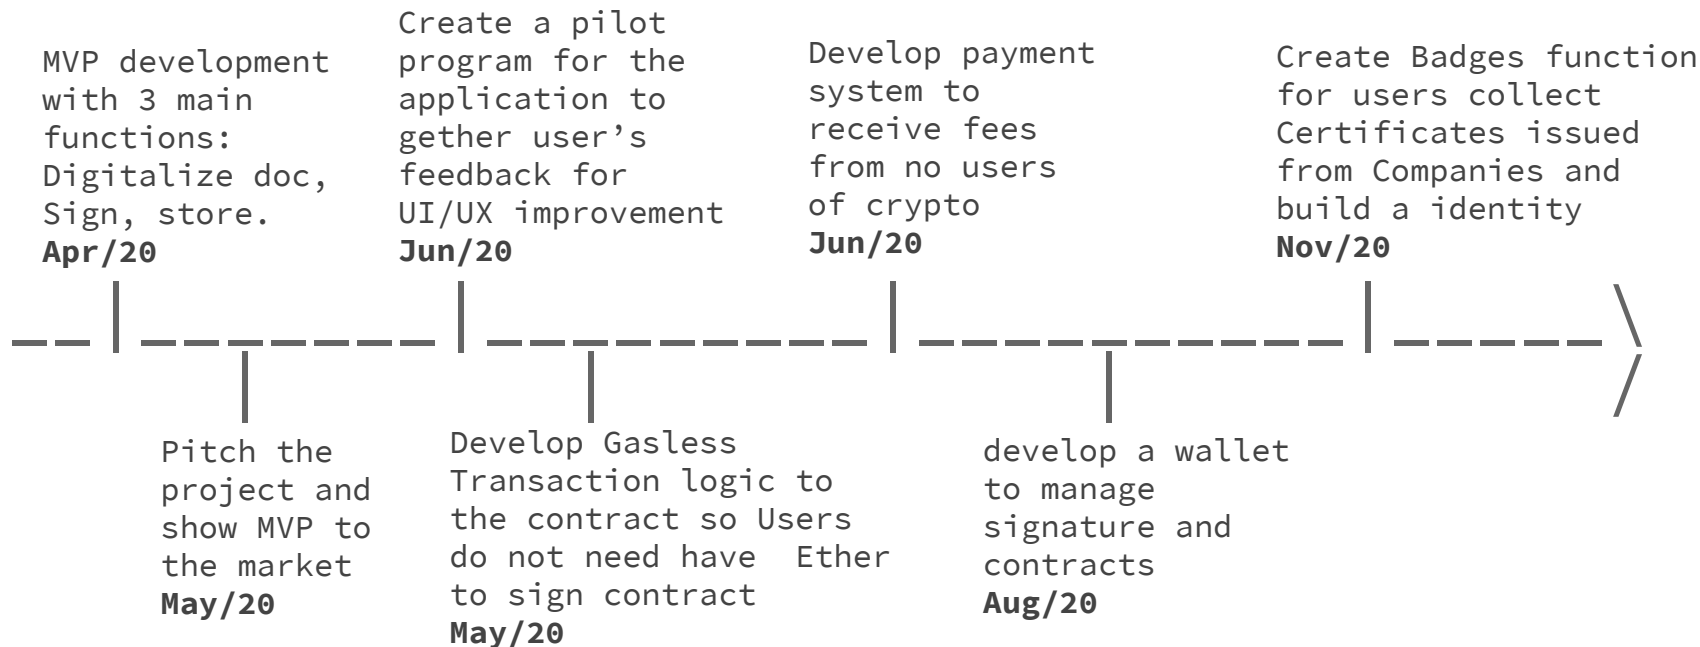

**Manage your collection of
Signed Contracts**

Product Roadmap

— — —

Takeaways

Blockchain can create a decentralized
Signature System that deliver

- +Security**

- +Reliability**

- +Sovereignty**
